

AEROFIX-U™

Polymeric rigid foam hanger with foam tape and self-sealing tape

Used for repairing and properly supporting pipes in chilled water or refrigeration systems

AEROFIX-U™ is a polymeric rigid foam hanger with a foam tape inner lining which supports and absorbs vibration of operating pipelines. The outer-cover consists of a special rubber tape which seals the hanger completely after installation in order to prevent condensation. Its strong closed cell structure is ideal for liquid cooling pipes to prevent condensation and save energy.
